

## Data Collection Worksheet

**Please Note:** The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

### **Summary of the Validated Hemophilia Regimen Treatment Adherence Scale - Prophylaxis (VERITAS-Pro™)**

The Validated Hemophilia Regimen Treatment Adherence Scale - Prophylaxis (VERITAS-Pro™) is a 24-item self-administered questionnaire that includes six subscales: Time, Dose, Plan, Remember, Skip, and Communicate. Each subscale includes four items which are rated on a 5-point Likert scales ranging from "Always" to "Never." Items can be scored in different directions depending on whether their wording reflects adherence or non-adherence. Each rating on the 5-point scale has a numeric score; the response indicating the "best" adherence is 1 point and the response indicating the "worst" adherence is 5 points. Subscale scores range from four points (most adherent) to 20 points (least adherent). Total scores range from 24 (most adherent) to 120 (least adherent).

The Validated Hemophilia Regimen Treatment Adherence Scale - Prophylaxis (VERITAS-Pro™) is a copyrighted instrument. Investigators should contact Natalie A. Duncan at the Indiana Hemophilia and Thrombosis Center to obtain a copy of the scale (see "Source").None
